New Zealand Industry Related work

From 1991 to 2014 I received support from the New Zealand Seafood Industry to help build their science program and perform stock assessments.

Acknowledgments

The ideas described in this paper have been developed while working with the New Zealand Fishery Industry Board (FIB) in examining the fisheries management process in New Zealand. The support of the FIB, and Ray Dobson and Andrew Branson in particular, is gratefully acknowledged. Dr. William Aron provided considerable useful comment on a draft of this paper. Dr. Jake Rice and two anonymous reviewers provided valuable insight on the history of the northern cod fishery, but we take all responsibility for the perspective provided in this paper.

Acknowledgments

Support for the research presented in this paper was provided by the New Zealand Fishing Industry Board. We thank Carl Walters, Don Ludwig, Jon Schnute and André Punt for advice on development of these methods and critique of the manuscript.

Acknowledgments

This work was funded by the New Zealand Fishing Industry Board. We thank Patrick Cordue, Chris Francis, and Paul Starr for their critiques of the procedure. We also thank Geof Givens, Tim Hammond, Antonio Perez-Comas, Geir Oddsson, Beth Babcock, John Wallace, Steve Hare, Ana Parma, Tom Wainwright, Steve Mathews, Don Gunderson, and Pat Sullivan for their suggestions to improve earlier versions of the paper. Four anonymous referees are also thanked for their comments that helped to improve the presentation of the work. Kevin Sullivan and Patrick Cordue are thanked for providing data for hoki. We are grateful to Nick Barrowman and Ransom Myers for providing us with the stock and recruitment data for gadoids.

and to the National Rock Lobster Management Group for their assistance in developing the decision rule. This work was supported by the Ministry of Fisheries (Contract SHRL01) and the New Zealand Fishing Industry Board.

**Acknowledgements**

We thank the large number of colleagues who have participated in these assessments and the New Zealand Fishing Industry Board for funding the work of P.S. and R.H. Dr. Doug Butterworth and an anonymous reviewer provided very helpful comments on an earlier version of this manuscript.

**Acknowledgements**

This work was supported by the Squid Fishery Management Company Ltd. and the New Zealand Department of Conservation. The specific work described here and preparation of the manuscript were supported directly by National Institute of Water and Atmospheric Research Ltd. (NIWA). Early development of the model was assisted by help from Billy Ernst, Leah Gerber, Frances Gulland, Ana Parma, Miguel Pascal, Paul Starr, and Paul Wade. We thank Andrew Branson, Jim Mace, and Ian West for their encouragement, members of the Sea Lion Technical Working Group for their suggestions on the conduct of this study (especially David Fletcher, Paul Starr, Kevin Stokes, and Liz Slooten), Terese Kendrick for her technical help, and Ian Wilkinson for the pup and reliability estimates. The manuscript was improved by comments from David Gilbert and Chris Lelas, and we thank them for their encouragement for their helpful comments.

**Acknowledgements**

We would like to thank Paul Wade and Andre Punt for their thoughtful reviews of this manuscript. Support for this research was provided by the New Zealand Fishing Industry Board.

**Acknowledgements**

This research was supported by the Icelandic Centre for Research and the New Zealand Seafood Industry Council. We thank André Punt, Jim Ianelli, Rick Methot, John Pope, and two anonymous reviewers for insightful comments, and Pamela Nelle for a thorough review of the manuscript.
Exxon and Exxon Valdez Work

No acknowledgements given – work was supported by State and Federal Governments and symposium was sponsored by them – I believe all papers were supported by the State and Federal governments in their suit against Exxon

Acknowledgments

This work was partly financed by the Exxon Valdez Oil Spill Trustee Council under State/Federal Natural Resource Damage Assessment Investigations. However, the findings and conclusions presented by the authors are their own and do not necessarily reflect the views or positions of the Trustee Council. We thank Karl English and Jim Irvine for helpful comments.

Acknowledgments

We thank Brian Bue, Brian Bigler, Claribel Coronado, Hal Geiger, Al Maki, Don Rogers, Jim Seeb, Bob Wilbur, John Winton, three anonymous reviewers, and numerous staff members of ADF&G for supplying data, discussion, and comments on the manuscript; R. Hilborn was supported in part by Exxon Corp.

Acknowledgments

We thank Ms. Allison Zusi-Cobb for creating Figure 1. The co-authors particularly appreciate the careful review and suggestions of three formal peer reviewers approved by the editors of Human and Ecological Risk Assessment, Drs. Gary Hitchcock, Wayne Manns, and Robert Tedley. The financial support for the Prince William Sound ecosystem conceptual modeling workshop and for the time needed to prepare this article was provided by ExxonMobil Corporation.
Bristol Bay Processors and Alaska Salmon

From 1999 to present I have been the principal investigator for the Bristol Bay research program in our department. We receive annual funding from up to 10 individual processing companies, from the Bristol Bay Regional Seafood Development Agency which is a non-profit arm of 1800 drift net fishermen in Bristol Bay, and from the Bristol Bay Economic Development Corporation, whose members are everyone who lives in the Bristol Bay watershed.

Acknowledgments

R. Stein, C. Habicht, R. Gustafson, F. Leonetti, P. Schlenger, T. Quinn, R. Nicholson, and the anonymous reviewers gave helpful and much-appreciated critical evaluations of the manuscript. K. Craig provided analytical assistance. Field assistance was provided by M. McPhee, A. Reischauer, N. Kocan, R. Kocan, N. Aspinwall, M. Hilgemann, D. Eastman, A. Hendry, and J. Miller. M. Duke assisted with preparation of the manuscript. Funding was provided by the Pacific Seafood Processors Association. The original data are kept on file at the University of Washington School of Fisheries archives; electronic or printed copies may be obtained by contacting the publications manager by telephone at (206) 543-4678, by fax at (206) 685-7471, or by e-mail at mduke@uwashington.edu.

This research was made possible by the long-term data sets for Bristol Bay maintained by the Alaska Department of Fish and Game and the Alaska Salmon Program at the University of Washington. We also thank the numerous students, faculty, and staff who contributed to these data over the past half century. We thank Jennifer Anson and Lucy Flynn for help in writing and assembling the manuscript, and T. Francis, A. Litt, J. Moore, W. Palen, M. Scheuerell, J. Anson, and J. Shepherd for helpful reviews. Funding for this work was provided by the National Science Foundation (Environmental Biology, Biological Oceanography, and Field Stations and Marine Laboratories), the Bristol Bay salmon processors, and the University of Washington.

ACKNOWLEDGEMENTS

This study was funded by the Pacific Seafood Processors Association, the Saltonstall Kennedy program, the National Science Foundation’s Long Term Research in Environmental Biology Program, and the Washington Sea Grant Program, University of Washington.

This work was supported by grants from the National Science Foundation award number 0308410 and Bristol Bay salmon processors. Comments from three anonymous reviewers were very helpful.

Aquatic Sciences 63: 1564-1577.

ACKNOWLEDGEMENTS

We thank the Alaska Department of Fish and Game for access to their data; the Pacific Seafood Processors Association, the Washington Sea Grant Industrial Fellowship Program, the National Science Foundation’s Long Term Research in Environmental Biology and BioComplexity programs, and the Gordon and Betty Moore Foundation for financial support; and Robert Francis for assistance with the analyses.

Acknowledgements

We thank the Alaska Department of Fish and Game for collecting the data and making it available to us. We also thank Eddie and Julie Slaton and the Chignik communities for logistical support, Greg Ruggerone, Jackie Carter, and Stephanie Zader for their many edits, Matt Mathieson, Melissa Holmes, Harry Rich, and Peter Wesley for assisting in the collection of age-composition data, and the National Marine Fisheries Service, Chignik Regional Aquaculture Association, and Alaska Salmon Program for funding this project.

Acknowledgements

Funding for this work came primarily from the Bristol Bay Science and Research Institute. RH had additional support from the National Science Foundation, The Gordon and Betty Moore Foundation, and Bristol Bay salmon processors. The staff of the Alaska Department of Fish and Game provided data, as well as valuable insight and discussions. Pamela Mace and an anonymous reviewer provided valuable comments that greatly improved the paper.

Acknowledgements

We are indebted to the efforts of previous FRI researchers, especially D. Nave, D. Thinley, M. Dahlberg, and B. Parr. J. Schoeneich, J. Carter, and J. Penner are thanked for their extraordinary efforts working with the historical Chignik database. Many people aided in field work; however, I. Smith and M. Henderson deserve special recognition. In addition, I. Smith performed much of the laboratory work. We thank the continued support of the residents of Chignik Lake, especially E. and J. Staton, and members of the Lind family. D. Hauver provided the map of the study site. The manuscript was greatly improved by comments of three anonymous reviewers. This work was possible through support from the National Marine Fisheries Service, the National Science Foundation award 0419437, the Gordon and Betty Moore Foundation, and the Chignik Regional Aquaculture Association. This is a contribution by the Alaska Salmon Program, School of Aquatic and Fishery Sciences, University of Washington.

Marine Reserves

From 2007 to 2009 I received consulting funds from several sport and commercial fishing groups in California to support work on modelling of the impact of small scale marine protected areas. In the mid 2000’s I was part of a NSF grant at UC Santa Barbara that involved modelling of small scale marine reserves in California.

These papers were published prior to any support

No acknowledgements.

No Acknowledgements Given

No acknowledgements given

This paper was published after industry support for MPAs was received.

Acknowledgements
This work resulted from a peer review of the MPA proposals for the central coast of California funded by the California Fisheries Coalition. RH was additionally supported in this work by a grant from the National Science Foundation (Award No. 0308440).
Other papers

Acknowledgments

We thank David Bergendorf, Mike Crewson, Aimee Fullerton, Curt Kraemer, and Marla Maxwell for help with data collection and compilation. The Shiraz model framework was initially developed with funding from the Muckleshoot Indian Tribe. We also thank Martha Neuman, James Schroeder, the Puget Sound Technical Recovery Team, and the Snohomish Basin Salmonid Recovery Team.

Several of the authors were employees of the Marine Stewardship Council and we filed a conflict of interest statement. The journal replied that this did not constitute a conflict of interest and included none. Documentation is available on request.
Trawling impacts

Fishing Industry Support acknowledged
